## (2) LEARNING OUTCOMES

### Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

In this course the student acquires the necessary basic knowledge concerning Electronic Physics and the physical insight of electric and electronic systems and circuits' operation.

With the completion of the course the students should be able to solve problems concerning general circuit analysis as well as basic operation principles of voltage operational amplifiers.

With the completion of the course the students are able to understand and explain the basic concepts of Electronic Physics and apply them in simple electronic circuits.
