

## COURSE OUTLINE

### (1) GENERAL

<b>SCHOOL</b>	School of Science		
<b>ACADEMIC UNIT</b>	Physics		
<b>LEVEL OF STUDIES</b>	Undergraduate		
<b>COURSE CODE</b>	<b>10YKO10</b>	<b>SEMESTER</b>	<b>1</b>
<b>COURSE TITLE</b>	<b>BASIC MATHEMATICAL METHODS</b>		
<b>INDEPENDENT TEACHING ACTIVITIES</b> <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		<b>WEEKLY TEACHING HOURS</b>	<b>CREDITS</b>
		4	6
<b>COURSE TYPE</b> <i>general background, special background, specialised general knowledge, skills development</i>	General Background		
<b>PREREQUISITE COURSES:</b>	No		
<b>LANGUAGE OF INSTRUCTION and EXAMINATIONS:</b>	Greek		
<b>IS THE COURSE OFFERED TO ERASMUS STUDENTS</b>	No		
<b>COURSE WEBSITE (URL)</b>	<a href="https://eclass.uoa.gr/courses/PHYS338/">https://eclass.uoa.gr/courses/PHYS338/</a>		

## (2) LEARNING OUTCOMES

### Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

The course provides an introduction to the basic mathematical tools that are necessary for the students of the Physics Department in order to be able to attend without obstacles the Physics courses that follow. Although this introductory course is not strictly rigorous, an extended discussion is followed in order to clarify the connection between the specific mathematical objects and the science of Physics. These mathematical tools are not covered by any other mathematical course.

With the completion of the course the student is able to:

- Handle vectors in 2 and 3 dimensions, perform operations with vectors (addition/ subtraction/ multiplication through interior or exterior product) and understand the necessity for invariance of the output of these operations. Be able to handle and write vectorial quantities properly and use indices for their description. Be able to analyze a vector in a given basis.
- Be able to use polar and spherical coordinates.
- Become acquainted with solid angles and be able to compute them.
- Handle matrices. Realize that matrices could be used either as transformational operators or as tensorial objects that could be transformed. Use the summation convention to describe operations between matrices. Know what the trace and the determinant of a matrix is, as well as the operations of transpose or inversion is.
- Know how to compute the eigenvectors and the eigenvalues of matrices are. Know what diagonalization of a matrix is and how to compute it.
- Perform operations with complex numbers and understand their geometric representation.
- Recognize a Hermitian matrix and understand that their eigenvalues are real.
- Be able to use all the above mathematical tools in physics problems

### General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

Search for, analysis and synthesis of data and information, with the use of the necessary technology  
Adapting to new situations  
Decision-making  
Working independently  
Team work  
Working in an international environment  
Working in an interdisciplinary environment  
Production of new research ideas

Project planning and management  
Respect for difference and multiculturalism  
Respect for the natural environment  
Showing social, professional and ethical responsibility and sensitivity to gender issues  
Criticism and self-criticism  
Production of free, creative and inductive thinking  
.....  
Others...  
.....

The course aims at the following general competences

Working independently  
Production of free, creative and inductive thinking  
Analytical and synthetic thinking  
Critical thinking  
Problem solving

### (3) SYLLABUS

- Complex numbers. Geometrical representation. De Moivre's theorem. Connection with geometry.
- Vectors and vector operations (addition-subtraction, inner and outer product) with applications to kinematics and geometry. Use of indices and summation convention.
- Matrices. Matrix operations. Matrices as transformations in two or three dimensions. The determinant as volume ratio. Operations on determinants and solution of linear algebraic systems. Inverse matrices. Rotation matrices in two dimensions.
- Eigenvectors and eigenvalues of  $2 \times 2$  and  $3 \times 3$  matrices. Matrix diagonalization. Invariance of the trace and determinant.
- Vector spaces as an algebraic structure. Linear independence. Basis. Dimension. Subspaces.
- Metric spaces. Vector orthogonalization.

#### (4) TEACHING and LEARNING METHODS - EVALUATION

<p><b>DELIVERY</b> <i>Face-to-face, Distance learning, etc.</i></p>	<p>Face-to-face Parallel live distance learning and recording.</p>											
<p><b>USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY</b> <i>Use of ICT in teaching, laboratory education, communication with students</i></p>	<p>Yes Electronic communication with the students using ICT (Information and Communications Technology), eclass platform</p>											
<p><b>TEACHING METHODS</b> <i>The manner and methods of teaching are described in detail. Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.  The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i></p>	<table border="1"> <thead> <tr> <th data-bbox="687 591 1031 618">Activity</th> <th data-bbox="1035 591 1361 618">Semester workload</th> </tr> </thead> <tbody> <tr> <td data-bbox="687 624 1031 651">Lectures</td> <td data-bbox="1035 624 1361 651">40</td> </tr> <tr> <td data-bbox="687 658 1031 685">Exercises</td> <td data-bbox="1035 658 1361 685">12</td> </tr> <tr> <td data-bbox="687 725 1031 824">Individual Study/ Study and Analysis of bibliography / Preparation</td> <td data-bbox="1035 725 1361 824">98</td> </tr> <tr> <td data-bbox="687 864 1031 891"><b>Course Total</b></td> <td data-bbox="1035 864 1361 891"><b>150</b></td> </tr> </tbody> </table>		Activity	Semester workload	Lectures	40	Exercises	12	Individual Study/ Study and Analysis of bibliography / Preparation	98	<b>Course Total</b>	<b>150</b>

<b>Course Total</b>	<b>150</b>											
Lectures	40											
Exercises	12											
Individual Study/ Study and Analysis of bibliography / Preparation	98											
<b>Course Total</b>	<b>150</b>											
<p><b>STUDENT PERFORMANCE EVALUATION</b> <i>Description of the evaluation procedure  Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other  Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i></p>	<p>Final written exams in Greek  Oral examination (when appropriate) Problems for students to solve at home (optional). The problems are uploaded in eclass.</p>											

## (5) ATTACHED BIBLIOGRAPHY

- *Suggested bibliography:*

- Notes (in electronic form) adjusted to the material of the course.
- Old school books with appropriate material.

- *Related academic journals:*

- Various articles on the relation between various aspects of Physics and the mathematical objects taught in the course.
